Deadline for manuscript
submissions:

30 June 2021

Message from the Guest Editors

Dear Colleagues,

Sustainability economics addresses the issue of growth by promoting the broader concept of economic development that takes into account the environmental and sociospatial impacts of economic activities. Achieving sustainable development means that business and industry will have to adjust production processes and operational structures towards reducing their environmental footprint (pollution, energy consumption, etc.) while increasing their socioeconomic contribution in local communities and regional prosperity. In this context, this Special Issue, starting from the premise that the overall goals of economic development and environmental conservation are not conflicting but mutually reinforcing, will comprise selected cross-disciplinary papers on innovative business practices and models of sustainable development and their environmental/social/economic impact as well as national/regional/industrial policies supporting and enhancing sustainable development.

Prof. Dr. Theodosios Palaskas

Dr. Chrysostomos Stoforos

Dr. Maria Tsampra
